

Ghex Theme Guide

26 Jan 2014

Ghex is a new css honeycomb styled theme for ghost, it's fully responsive and ready for Iphone/Ipad.

Ghex takes first post's Image, Soundcloud, Youtube or Vimeo and makes snapshots as "Featured Image".

You can change logo and background easily from backend, and if you want even more customization you only need to edit a few css lines.

Installing

To install Ghex just follow this steps:

```
Copy "ghex" folder in content/themes/
```

```
Restart Ghost. At the moment, Ghost  
won't notice that you've added a new  
folder to content/themes so you'll need  
to restart it.
```

```
Login to your Ghost admin, and navigate
```

```
to /ghost/settings/general/
Select 'Ghex' in the 'Theme' options
dropdown
```

```
Click 'Save'
That's it!
```

Post cover

Ghex takes first non-text element from post and makes a snapshot for post cover.

Current version allowed elements are Images and SoundCloud/Youtube/Vimeo Iframes. They will be auto-resized at a minimum 400height.

So, if you want to use an embeded video, you should place it before any element with `<iframe></iframe>` code.

Youtube code should look like this:

```
<iframe width="500" height="415"
src="//www.youtube.com/embed/VTceN1lnRgk"
frameborder="0" allowfullscreen></iframe>
```

Vimeo:

```
<iframe src="//player.vimeo.com/video
/76318215" width="500" height="400"
frameborder="0" webkitallowfullscreen
mozallowfullscreen allowfullscreen></iframe>
Hexagon color
```

Soundcloud:

```
<iframe width="100%" height="166"
scrolling="no" frameborder="no"
src="https://w.soundcloud.com/player
/?url=https%3A//api.soundcloud.com/tracks
/112921687&amp;color=ff5500&
amp;auto_play=false&show_artwork=true">
</iframe>
```

Customize

You can edit background settings, main colors, add some static pages, enable disqus comments or put your social buttons. To make all this changes you have to edit

```
/ghex/assets/js/ghex_config.js
```
